Warning

- *Installation should start after the contents of this instruction manual is read and fully understood
- *Injury may be caused by improper installation.
- *Installation should be entrusted to a professional technician.
- *Double check all wire connections. Avoid all plastic or painted surface for ground wire. Bad ground may cause poor actuation of turbo timer and cause the breakdown of this product.

Caution for installation work

1. Vehicles equipped with computer preset automatic steering.
 - Note that steering wheel does not tilt up even if the ignition key is pulled out when the product is installed in vehicles equipped with computer preset automatic tilt steering.
2. Vehicles equipped with automatic light control.
 - Note that the light may be kept on even after the timer is off. When the turbo timer is actuated with the light switch is AUTOMATIC. The light will remain on after the car shuts off.
3. Actuation of air conditioner.
 - Depending on the types of automobile, extremely large electric current may flow and cause breakdown of the turbo timer when the turbo timer and air conditioner is simultaneously actuated. Be sure to turn off air condition when the turbo timer is actuated.

Instructions for installing safety features

***Important-the parking brake wire (purple) must have ground signal at all times, either by grounding the wire or reading ground signal from the parking brake wire. If purple wire is not install correctly, the turbo timer will automatically shut off when key is taken out.**

1. Parking brake. Purple wire
 - A. Single wire parking brake. connect purple wire as shown in figure A.
 - B. More than one wire.
 - a. Turn key to ON position. (do not start engine)
 - b. Use test light to find the wire with 12V power when the parking brake is down. Connect to that wire as shown in figure B.

CAUTION: Parking brake can be bypass if purple wire is grounded.

*Engine will shut off if the parking brake is release at anytime during count down.

2. Confirmation

-Check if all wires are connected securely. Insufficient wiring may cause poor actuation of the product. In the worst case, it may result in the breakdown of the engine.

-Be sure wiring are neatly installed without any interference with surrounding parts. Short circuit may occur due poor connections. In the worst case, it may result in breakdown or the engine.

CAUTION: When confirming actuation of turbo timer, be sure that the gear is in neutral or parking position and the foot is on the brake. Also be sure there is no one around the vehicle.

In case of Failure of product

Check the following before concluding there is any failure of this product.

1. Check if wires is connected securely and connectors is inserted rigidly.
2. Check if ground wire is ground correctly.
3. Check if tap is securely connected.

- 1 - Power Button
